Information for doctor
Most important symptoms and effects, both acute and delayed:
No data available
Danger
Platinum compounds, especially platinum halogen complexes, are sensitizers. Sensitized persons, on

re-exposure to platinum salts, will show the clinical features of
a Type 1 allergy: asthma and/or rhinitis and/or conjunctivitis and/or urticaria. A contact dermatitis may also occur. The symptoms of the allergic reaction to platinum
salts may include any of the following: itchy red eyes, watering of the eyes, sneezing, runny nose, chest tightness, wheezing, breathlessness, cough, eczematous or
urticarial (nettle rash type) skin lesions. Exposure to platinum salts in exceedingly small amounts, even below the level of
physico-chemical detection, will produce symptoms in sensitized persons. Continued exposure will give symptoms of increasing severity and can eventually lead to
chronic asthma. There is a risk of anaphylactic shock occuring in sensitized persons re-encountering platinum salts. Therefore, if sensitization has developed, further
exposure to platinum compounds must not be permitted.
Indication of any immediate medical attention and special treatment needed:
No data available

SECTION 5. FIREFIGHTING MEASURES

Extinguishing media
Suitable extinguishing agents Carbon dioxide, extinguishing powder or water spray. Fight larger fires with water spray or alcohol resistant foam.
Special hazards arising from the substance or mixture
If this product is involved in a fire, the following can be released:
Carbon monoxide (CO)
Sulfur oxides (SOx)
Hydrogen chloride (HCl)
Metal oxide
Advice for firefighters
Protective equipment:
Wear self-contained respirator.
Wear fully protective impervious suit.
