To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly

investigated., Symptoms of systemic copper poisoning may include: capillary damage, headache, cold sweat, weak

pulse, and kidney and liver damage, central nervous system excitation followed by depression, jaundice, convulsions,

paralysis, and coma. Death may occur from shock or renal failure. Chronic copper poisoning is typified by hepatic

cirrhosis, brain damage and demyelination, kidney defects, and copper deposition in the cornea as exemplified by

humans with Wilson's disease. It has also been reported that copper poisoning has lead to hemolytic anemia and

accelerates arteriosclerosis.
